Deployment strategist and founding operator · Enterprise AI adoption at Delta Air Lines · Seed-stage CPO who sells, ships, and gets customers live

SUMMARY

I deploy AI with customers and own what happens after the contract. At Delta Air Lines I led AI delivery pilots across five departments, cutting effort per feature from about 96 hours and three people to about 5 hours, was on the founding team of Delta Concierge, designed the AI development operating model, and trained about 400 practitioners. At Capgemini I mapped manual workflows and replaced them with automation for a Class I railroad. As CPO of PinnTag, a seed-stage AI startup, I started as the consultant who reviewed the codebase and prototyped the agent, then took the seat: product, go-to-market, a weekly release cadence with a team in India, and the first venues signed in person. Georgia Tech finance; I build with Claude and Kiro daily and write the playbook after I have done the job once.

SELECTED RESULTS

- Cut effort per feature from about 96 hours and three people to about 5 hours with AI delivery pilots across five Delta Air Lines departments; AI-generated features shipped to production.
- Opened an Atlanta venue corridor in person: ten conversations, one signed, a three-venue verbal yes, and zero no's in week one, with a founding-member agreement and a weekly investor scorecard.
- Founding team member of Delta Concierge, the AI assistant in the Fly Delta app: in its three-day product workshop I built the working prototype of proactive customer outreach during irregular operations, and AI prototyping became a permanent shaping practice.
- Took PinnTag from zero customers to its first signed Atlanta venues, selling and onboarding them myself, and compressed releases from every 3 to 4 months to weekly with an engineering team in India.
- Founded Symphony AI: delivered a hands-on Claude training for Excel Sports Management and built Claude skills with eval suites, plus automated trading systems on the Alpaca and Kalshi APIs.

EXPERIENCE

Chief Product Officer | PinnTag **May 2026 – Present**

Atlanta / Remote · Real-time local discovery platform for consumers, venues, and AI assistants (pre-seed) · Engaged first as a Symphony AI consultant in May 2026; CPO under a signed MOU from May 27; full time from July

- Consulting engagement first: reviewed the AI microservice codebase and wrote the executive AI architecture assessment (a dead vector store, unmetered endpoints, prompt-stuffed "training" with no feedback loop, OpenAI lock-in), then prototyped the Proactive Marketing Agent and wrote the Integrator build plan; the work led to the CPO seat.
- Joined at zero paying customers; own product and go-to-market end to end with a contracted engineering team in India.
- Signed the first Atlanta venues myself (one live, a two-venue ownership group under founding-member agreements) and redesigned onboarding for consumers and business owners (signup, activation, first value).
- Designed the background marketing agent through context engineering rather than prompting: a context engine fuses the merchant's private data (POS sales curve, inventory gluts, brand voice from onboarding) with public signals (weather, holidays, local events) and writes three ready-to-post campaigns per goal, each citing the signal that produced it, approved in one tap through the existing API. The pitch: do not make the business write the prompt; read the room and write the campaign.
- Compressed releases from every 3 to 4 months to weekly: worked on-site with the team in India, installed a one-week sprint cadence, a decision log, and a launch gate that cut 474 raw items to 36 required; built the company's own backlog-management tool with AI-assisted development.
- Run the Atlanta corridor deployment myself: in-person venue sales, founding-member agreements, preload-then-claim onboarding, a Friday investor scorecard, and the company's seed-investor meeting.

Founder | Symphony AI (symphonylabs.ai) **2026 – Present**

Atlanta, GA · AI consulting, custom agents, and hands-on Claude training, with a technical partner

- Designed and delivered "From Prompt to Power" for Excel Sports Management: a hands-on Claude training where every attendee left with a working skill; built a document research skill with citations and an eval suite.

- Built automated trading systems on the Alpaca (options) and Kalshi (event contracts) APIs with AI-assisted development; the PinnTag consulting engagement (codebase review, AI architecture assessment, agent prototype) became the CPO role.

Senior Enterprise AI & Agile Coach (AI delivery lead) | Delta Air Lines **May 2023 – Jun 2026**

Atlanta, GA · Delta Coaching Office; AI-enabled product delivery across the product development lifecycle

- Led end-to-end Kiro AI delivery pilots across Employee Services, Airport Operations, Digital, Crew, and Reservations: facilitated shaping, spec-driven development, and rapid build sessions so teams moved from idea to working software in a sitting.
- Cut effort per feature from about 96 hours and three people to about 5 hours; enabled a non-developer SME in Airport Operations to ship production-bound features and pull roadmap items forward by years.
- Founding team member of Delta Concierge, the AI assistant in the Fly Delta app: in the three-day product workshop I built the working prototype of proactive customer outreach during irregular operations (IROPs) with Kiro.
- Designed the AI development operating model and the path to production: AI-assisted code review, automated CI/CD, and security scanning at generation and deployment time.
- System administrator and strategy owner for Delta's 5,000-user Agility tool (Digital.ai): configuration, the enterprise work structure, and the roadmap of AI features for internal users. Built a Product Owner Agent in Copilot Studio that drafts features from product documentation.
- Created hands-on AI-development training and M365 Copilot office hours; participants ranked them above Microsoft-led sessions because they used real Delta work.

Enterprise Agile Coach | Delta Air Lines **Nov 2021 – May 2023**

Atlanta, GA

- Trained about 200 Scrum Masters and 200 product owners and product managers; as a SAFe 6.0 Practice Consultant, taught and certified SAFe POPM classes.
- Designed Delta's future-state product management model, led the GOLD Upskilling Journey (a four-month hands-on product owner program), and authored core sections of the Delta Product Playbook.

Senior Consultant / Agile Coach | Capgemini **Aug 2019 – Sep 2021**

Atlanta, GA

- Led Lean Six Sigma and UiPath automation engagements for a Class I railroad and a national restaurant chain: interviewed operators, mapped manual workflows, and deployed bots that replaced spreadsheet-based tasks.
- Coached agile teams across the US, UK, Canada, Hungary, Brazil, and India; stood up new squads, authored an agile playbook, and installed delivery cadences for enterprise transformations.

Earlier (2016 – 2019): Stan Johnson Company, financial analyst intern (100+ breakeven models for a Fortune 100 client and PE acquirers; $3M+ projected rent savings) · Equifax, process improvement intern · UBS, wealth management intern · Clutch Technologies, operations intern.

EDUCATION AND CERTIFICATIONS

Georgia Institute of Technology, B.S.B.A., Finance (2015 – 2019) · University of Oxford, Business Administration (2016) · SAFe 6.0 Practice Consultant (SPC) · SAFe POPM Trainer · Lean Six Sigma

SKILLS

AI deployment: discovery and scoping, TCO and ROI cases, PRDs and specs, pilot design, adoption metrics, enablement and office hours, playbooks; Claude, Claude Code, Claude skills and evals, Kiro, Copilot Studio, M365 Copilot, MCP

Delivery: spec-driven development, AI-assisted code review, CI/CD, security scanning, SAFe 6.0 SPC, Scrum, Jira, Azure DevOps, Confluence, GitHub; offshore team leadership; Lean Six Sigma; UiPath RPA

Domain and tools: SQL and Python (working, AI-assisted), REST and trading APIs (Alpaca, Kalshi), options and derivatives (2,000+ trades), two-sided marketplaces, SMB and enterprise sales in person
